

New CIP3 interface for Heidelberg's CP2000®  
and Press Center® consoles

# IZ Instant Link for Heidelberg Presses

Transition seamlessly from a discontinued Heidelberg Prepress Interface software version to InkZone Instant Link. This advanced ink key preset solution operates on the latest Windows 11 Pro operating system, ensuring compatibility and efficiency. InkZone Instant Link integrates effortlessly into your current workflow, maintaining optimal press performance without interruption.

## Better buy than rent

Complimentary software updates for the first 12 months following your purchase. Afterward, updates are accessible at a reasonable cost, ensuring your solution remains up-to-date affordably.

## Go with the flow

InkZone seamlessly integrates with any prepress workflow and is fully compatible with Heidelberg CP2000® and Press Center® consoles. It efficiently processes data in CIP3/4 format, Tiff files, and even imposed PDFs, transmitting them directly to the offset printing press for precise ink key presetting.

## Easy for press operators

Jobs delivered via InkZone Instant Link to the Heidelberg console are managed identically to those from the Prepress Interface®. This ensures a smooth transition, eliminating the need for additional training for press operators.

## Console interaction

InkZone Instant Link harmonizes flawlessly with your console's existing software suite. Heidelberg's Color Assistant® adeptly manages press calibration across diverse substrates. Meanwhile, Image Control®, Axis Control®, and Inpress Control® continue to deliver color control, maintaining the reliable performance you have come to expect, even after integrating InkZone Instant Link.

## Software Only

InkZone Instant Link is a streamlined software-only solution, requiring just a modern PC running Windows 11 Pro. It communicates with your prepress network and Heidelberg CP2000® or Press Center® console via standard Ethernet. Installation and training are conveniently conducted through remote access, simplifying the integration process.

## Investment Saver

Lacking an ink key preset system? InkZone is the ideal solution to modernize your press. For those still operating with the legacy Heidelberg Prepress Interface, make the switch to IZ Instant Link – the future-proof upgrade for your Heidelberg press.

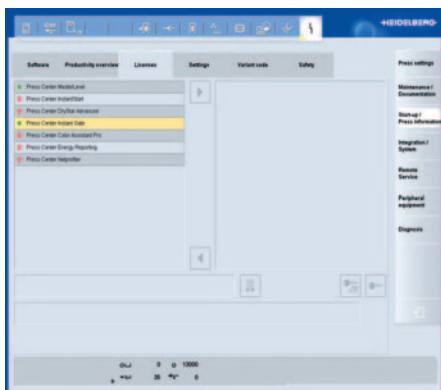

## Configuration IZ Instant Link

- Supports all Heidelberg offset press consoles CP2000® and Press Center® equipped with the Heidelberg option «Instant Gate®». If not already licensed, this option can be obtained from Heidelberg.
- Flexible press calibration: Choose between InkZone Perfect for tailored ink-preset curves or opt for the Heidelberg «Color Assistant®», a Heidelberg option for advanced calibration capabilities.
- Reliable Alternatives: Digital Information products «InkZone Link» for the CP2000® and «InkZone Net» for the Press Center® console, eliminating the need for Instant Gate and Color Assistant options.

## Ready for Replacement

Many Heidelberg offset presses in daily production are equipped with legacy or defective ink key preset systems. Usually they run on outdated operating systems like Windows 2000/XP/7; ready to be substituted by InkZone:

- Heidelberg Prepress Interface®
- Heidelberg Prinect Pressroom Manager®
- Lithotel Colorlinx.

*Instant Gate® is all you need to connect the CP2000® and/or Press Center® console with InkZone Instant Link.*

*Generated by IZ Instant Link, new preset jobs integrate into the press console workflow.*

Press Center, Speedmaster, Instant Gate, ColorAssist, Inpress, AxisControl, Prinect Pressroom Manager and ImageControl are trademarks of Heidelberg Druckmaschinen AG and are used here to identify the products which InkZone Instant Link is compatible with.
